API

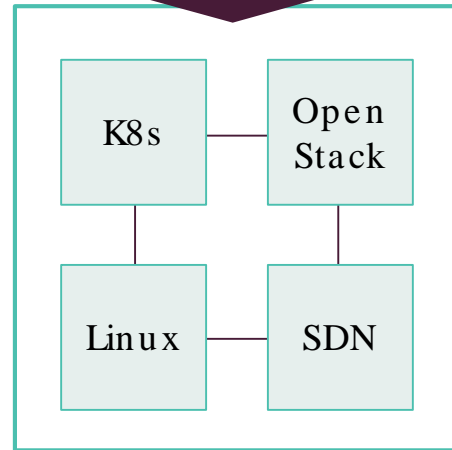

*Consume IaaS*

As enterprises move from Building IT to Consuming IT, Managed Open Cloud will become the de-facto standard approach for consuming open source innovation.

**MANAGED**

Turnkey and  
Continuously  
delivered

**OPEN**

Based on open  
source standards  
with option to  
transfer

**CLOUD**

Full stack  
designed for  
consumer, not  
builder

## **Mirantis' Mission**

*To be the world's most effective vehicle for converting open source innovation into customer value.*

Traditional IT vendors live in “Build IT” world and design “software lego blocks” catering to the horizontal design pattern aimed at IT builder, not the IT consumer

# Traditional IT vendors live in “Build IT” world and design “software lego blocks” catering to the horizontal design pattern aimed at IT builder, not the IT consumer

Public cloud vendors live in “Consume IT” world and design follow a full stack design pattern aimed at IT consumer.

**Managed Open Cloud** must be built following the vertical design pattern of public clouds.

**NOT** be stitched out of “enterprise software”

# Clouds that fail to follow “the full stack” design pattern are costly to maintain and cannot be continuously delivered.

# Clouds that fail to follow “the full stack” design pattern are costly to maintain and cannot be continuously delivered.

**Managed Open Cloud** must be continuously delivered on a synchronized cycle with underlying components.

# All public clouds are designed to be continuously delivered.

Help this lonely guy!

OpenStack

Wrong Champions

EnterpriseStore

EnterpriseNet

EnterpriseLinux

**Managed Open Cloud** must be delivered as-a-service to force the focus on the right champion.

**Managed Open Cloud is a combination of open software and operations process, enabling “public cloud like” experience on premise and with no lock-in.**

	Public	Managed Open Cloud	Traditional Managed Service
How is it built?	Vertically integrated, leveraging open source	✓	Using enterprise cloud software
How is it operated?	Infrastructure-as-code / continuous delivery	✓	Deploy and forget / rip and replace
How is it sold?	As-a-service	✓	Software license or subscription

# Mirantis delivers Managed Open Cloud using the Build Operate Transfer model. Full stack experience, zero lock-in.

## Build

- Leading cloud platform software
- Plan, architect, implement with focus on your cloud success

## Operate

- Fully managed cloud with up to 99.99% SLA guarantee
- Cloud, tooling, and ops team 100% focused on your success

## Transfer

- Co-manage for a fixed period
- Train and certify your ops team on your terms
- Transfer to support with choice of SLAs

Demonstrating business value through all phases of the journey

# All software is based on open source standards. No license or IP lockin.

## Build

- Pure-play open source cloud to run containers, VMs and bare metal
- Continuous innovation and LCM with CI/CD pipeline
- Continuous monitoring for hassle free operations

## Mirantis Cloud Platform

### DriveTrain

Lifecycle  
Management (LCM)

### Open Cloud Software

37M customers

#1 in customer satisfaction

250 channels

"OpenStack brings innovation to meet our needs better than private vendors. Cloud architectures in a closed ecosystem just don't allow for enough freedom of integration and customization."

- Amit Tank, Sr. Cloud Architect

## Business Challenge

Deploy an online video solution within 2 months that supports 250 live channels

Offered at a competitive price (low cost) with no contract

Take advantage of current satellite broadcast system

Bring new capabilities - E.g., cloud time- shifting and multiple video profiles

## Solution

Platform - MCP with OpenStack and OpenContrail running in AEG data center

Custom Instance Type - 66 vCPUs / ~152 Ghz per node (high compute density)

Workload - Harmonic VOS Media Processing Platform

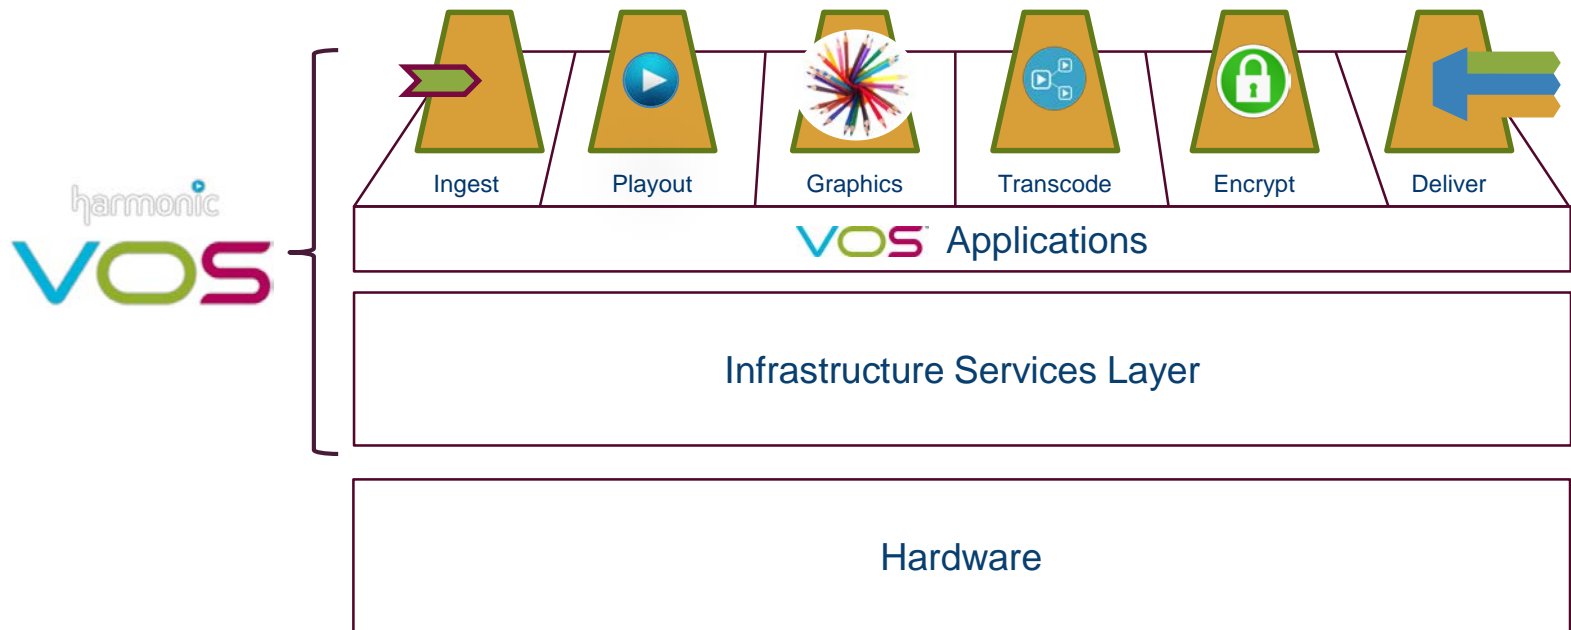

Monitoring probes to provide tenant visibility

## Results

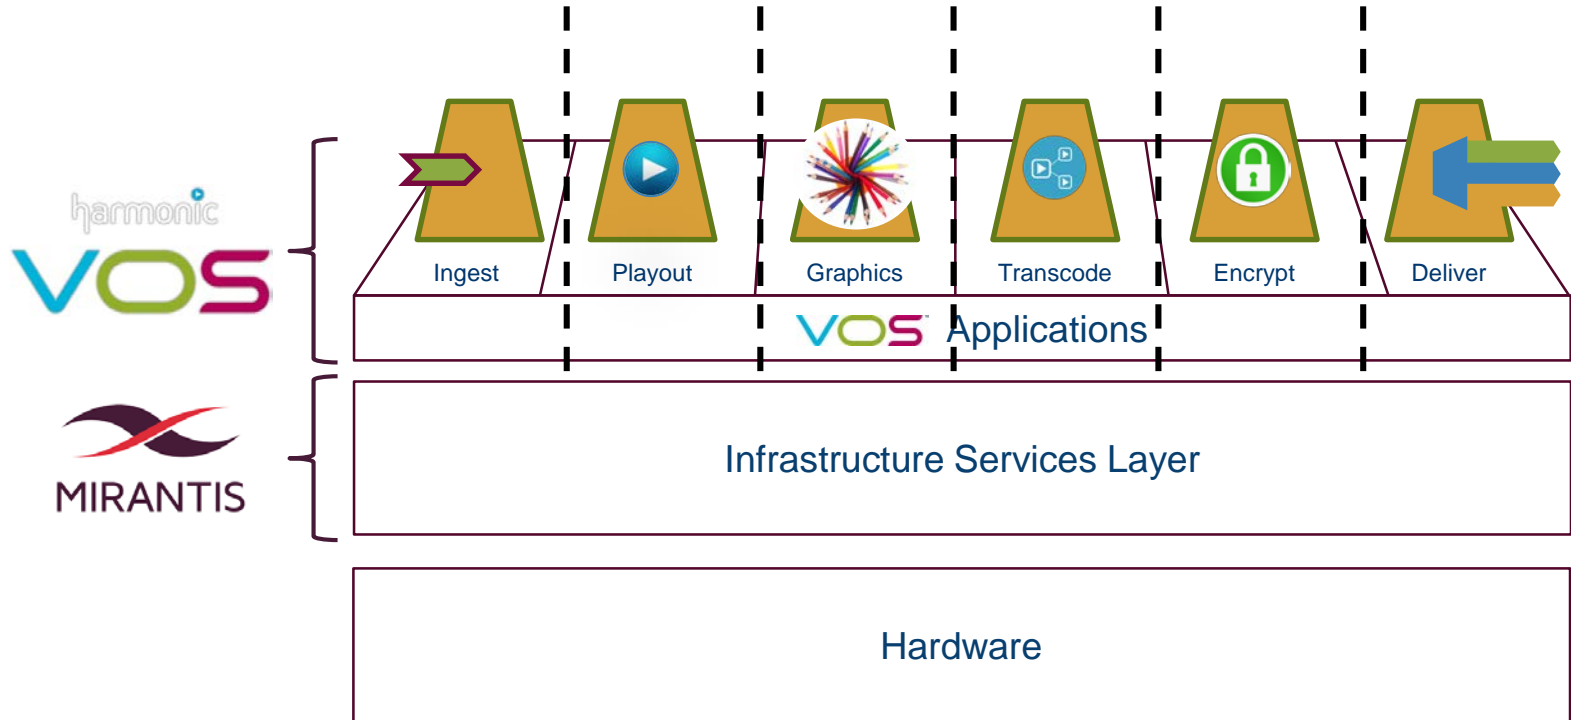

\$120M/ year (estimated) in subscription revenue for AEG

Ability to optimize efficiency and performance over time
